Reference:

data format:

data name

x_data1, y_data1

x_data2, y_data2

data box is pure text;

can be resized by user pu

will show scroll bar when

```
data name
x_data1, y_data1
x_data2, y_data2
```

Update Data Set

- data box is pure text;
- can be resized by user pulling right bottom corner
- will show scroll bar when data are out of the range of box

[illegible]

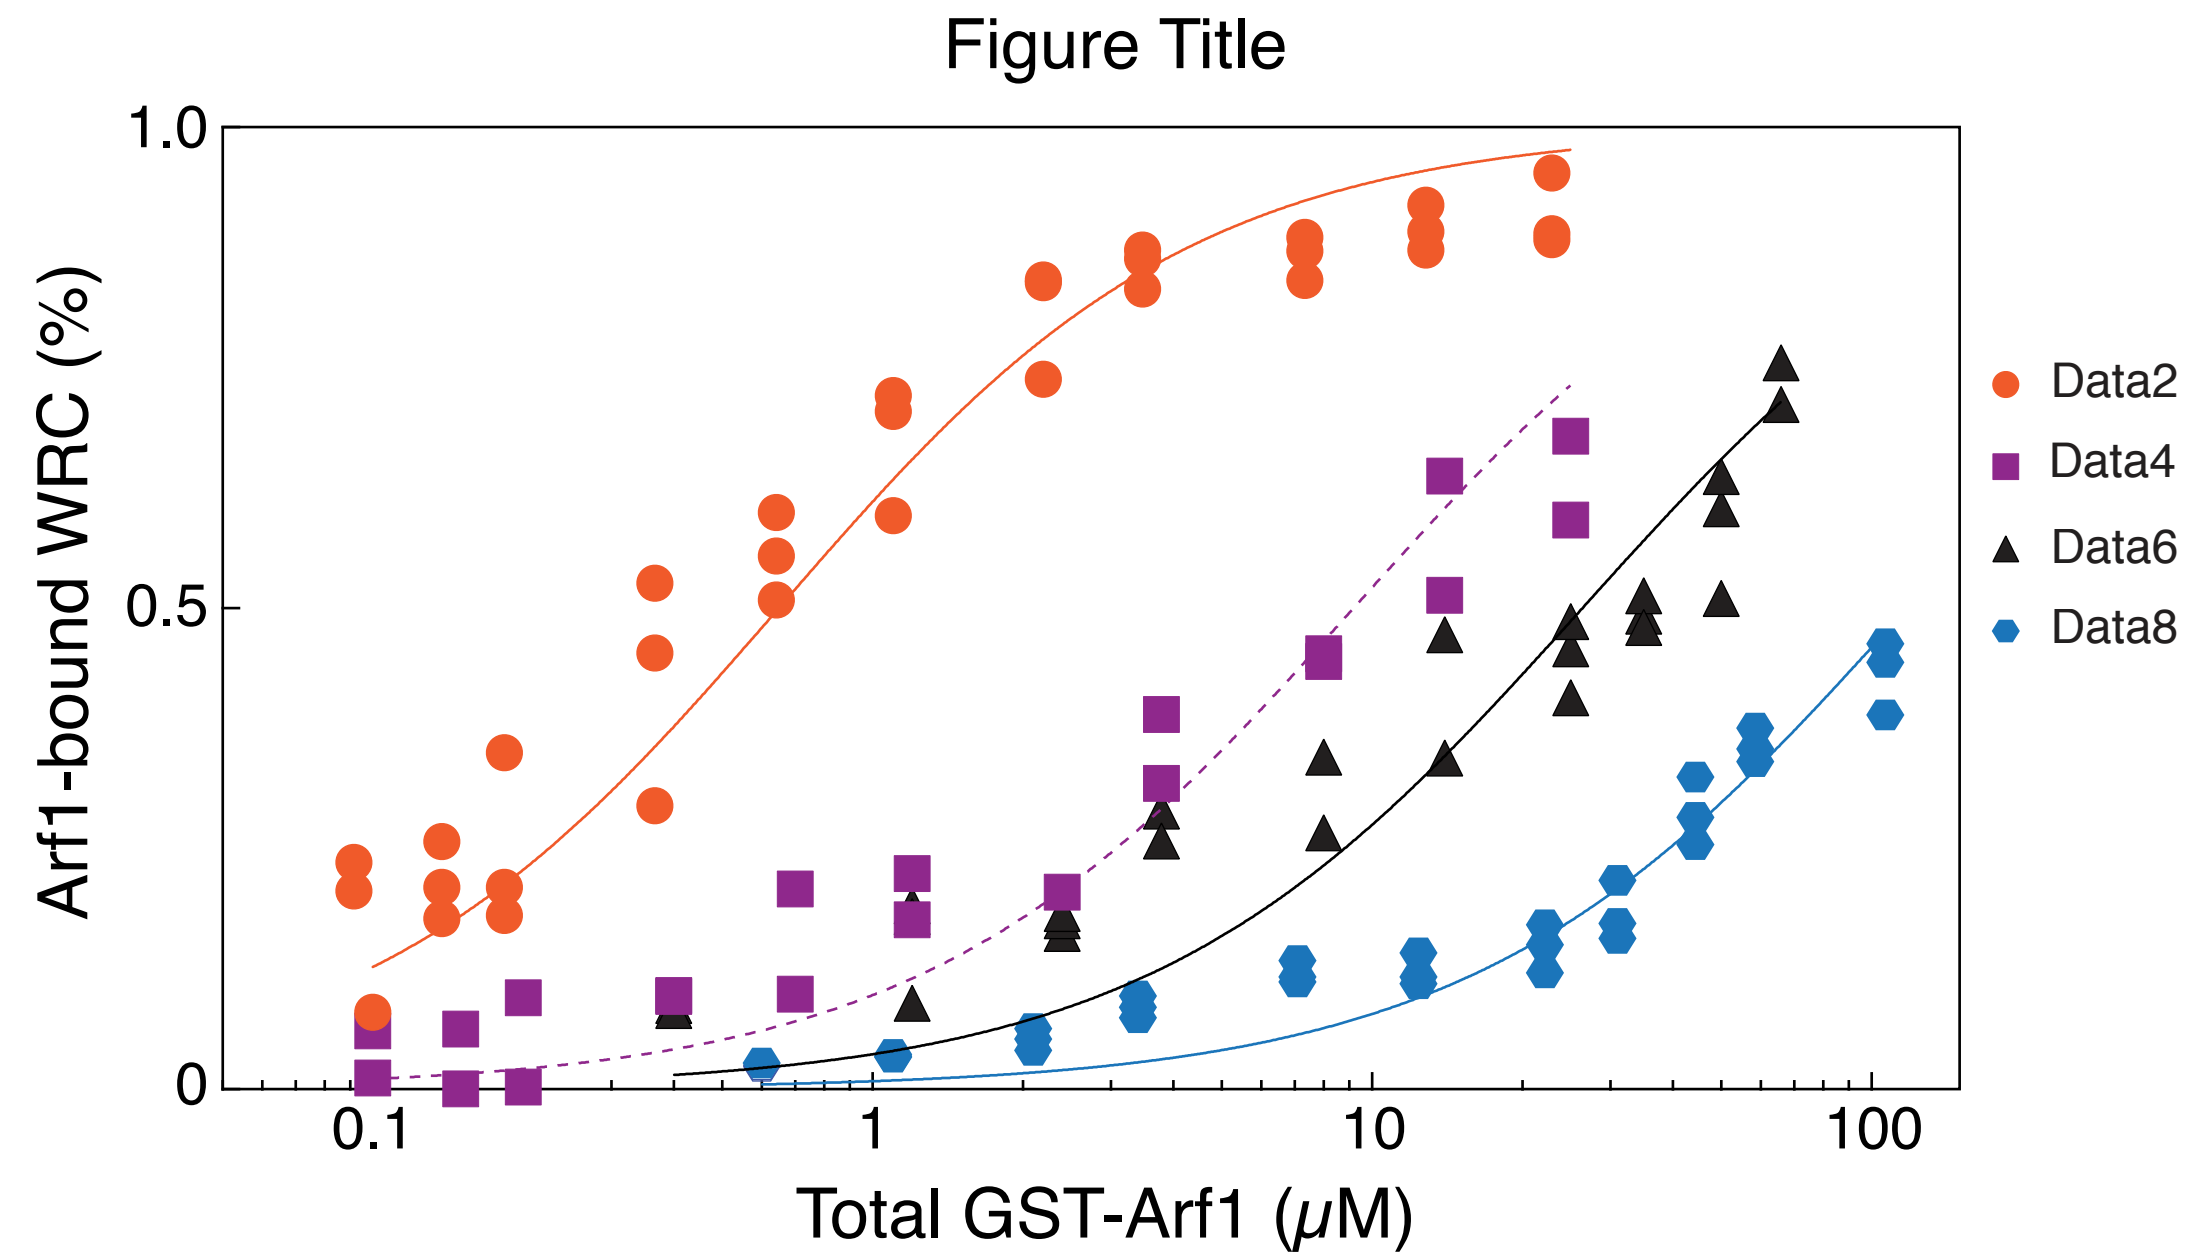

Each data analysis can generate a unique web address. This web address can be emailed to the user email, which user can click to retrieve their analysis results.

Each data analysis can generate a unique web address. This web address can be emailed to the user email, which user can click to retrieve their analysis results.

Data Sets

[illegible]

Plot type: scatter/line ● swamp/bar ○

Graphing box is adjustable by user by dragging the bottom right corner.

The following can be defined by user for both X and Y axes directly from the graph:

- axis display range (min and max)
- tick interval
- log scale or not
- Figure title, X-axis title, Y-axis title
- Axis line width and color
- tick line width and color
