

Uber for vets?

Users: vets (service providers), pet owners (person requesting a service)

Identity verification needed - users

Vets must validate credentials - **how?** Standard background check services

2FA

Payment through app

Insurance information

Petdesk

Purpose of the project is to provide vets who may not have a physical office to provide services

Functional requirements

- service providers should be able to link to calendars
- service providers should be able to give an estimate of time per appointment
- Pet owners may grant vets pet medical records (must opt in)
- Visit reminders
- Mutual feedback (most likely star rating)
 - How did the service provider do?
 - How was the pet owner?
- Vet go to clients
- WebMD
 - Classification
 - Feature: symptoms
 - Label: scientific diagnose
- Keep track of appointments

Just dogs and cats for now

User will submit a request for service, system will broadcast to willing providers, whoever accepts the request first will be given an approximate timeline of service (also costs)

Preferences when setting up appointments: 5 star+, previous vets*

Payment - look for api
