What we need:
- Inbox screen
    - https://reactjsexample.com/inbox-built-upon-react-and-es6/
- Project screen
- Data screen
    - I believe Mitra wants tables
- Settings screen
    - What settings do we want
        - NumIssues to expect
        - NumCommits to expect
        - Theme?
        -
- Extract the colors to an individual file

What we need done by demo 2:
- Update team website
-

Questions for Mitra:
- Changes for current project/mockup pages? Approval for current things?
- Users pushing code to repositories from different accounts? How should this be handled
- Should branch commits count, or should only commits to main count for total user contributions? (maybe differentiate between main branch commits and all commits)
- When you are looking at an individual project, what information should go in project status?
- When looking at the data page, would there be different information when looking at a single semester versus looking at all available semesters?
- Would you like to filter teams on the dashboard homepage?
    - Filter by what
-

After demo:
- Consider multiuser (students won't need data page)
- Consider mobile
-
